Mail Config

Todd, James C [james.c.todd@abbott.com]

Sent: Monday, October 01, 2012 12:53 PM

To: Don Frank

One common Sendmail configuration is to have a single machine act as a mail gateway for all machines on the network. For instance, a company may want to have a machine called **mail.example.com** that handles all of their email and assigns a consistent return address to all outgoing mail.

In this situation, the Sendmail server must masquerade the machine names on the company network so that their return address is **user@example.com** instead of **user@host.example.com**.

To do this, add the following lines to **/etc/mail/sendmail.mc**:

```
# FEATURE(always_add_domain)dnl
# FEATURE(`masquerade_entire_domain')dnl
# FEATURE(`masquerade_envelope')dnl
# FEATURE(`allmasquerade')dnl
# MASQUERADE_AS(`bigcorp.com.')

```

make -C /etc/mail/
